Another look at definitions in existentials

Yong Zi

Department of English, The Hong Kong University of Science and Technology

Background and purpose

(Submitted 10 December 1979)
2. A DESCRIPTION OF THE CONSTRUCTION IN QUESTION

In the context of the construction in question, the word "construction" should be replaced by the word "description". The sentence should read: "In the context of the description in question, the word "construction" should be replaced by the word "description"."
9

\[ p(x) = \frac{1}{\sqrt{2\pi}} e^{-x^2/2} \]

3 Possible Explanations

1. The function \( p(x) \) is a Gaussian distribution, often used in statistics and probability theory. It is defined as

\[ p(x) = \frac{1}{\sqrt{2\pi}} e^{-x^2/2} \]

2. The function represents the normal distribution, which is a special case of the Gaussian distribution. It is symmetric around the mean \( \mu \) and has a standard deviation \( \sigma \). The probability density function (PDF) is given by

\[ p(x) = \frac{1}{\sqrt{2\pi \sigma^2}} e^{-((x-\mu)^2)/(2\sigma^2)} \]

3. The function is a probability density function (PDF) of a continuous random variable. It describes the likelihood of a variable taking on a specific value or range of values. The PDF is non-negative and integrates to 1 over the entire range of the variable.
A comparison of the existing data shows it is difficult to project the scope of the problem.

The paper examines the existing data, providing insights into the current situation.

"The results are presented in the main body of the paper."

If you require more detailed information, please refer to the methodology section.

4.2 Possible Future Research

In conclusion, further research is needed to fully understand the scope of the problem.
